## SAGE FAS

## REMOTE ACCESS TO SAGE FAS

### SAGE FAS AND REMOTE ACCESS TECHNOLOGIES GIVE YOU MANY ADVANTAGES OVER WEB-BASED FIXED ASSET SOLUTIONS:

#### SECURITY

All Sage FAS fixed asset data is stored safely at your central location, on your server. Many Web-based systems require that you host your data in a datacenter.

#### FLEXIBILITY

Adding additional remote users is fast and easy! Simply use a thin client such as Citrix or access through a Web browser using Microsoft Windows technology.

#### RELIABILITY

Data is always accurate and reliable. The Sage FAS application and database are stored in one location instead of multiple databases on multiple computers.

#### COMPATIBILITY

Remote access technologies are compatible with all operating systems and is built into most newer Windows operating systems or is available as a third-party solution.

#### UPGRADEABILITY

It's easy to upgrade with remote access technologies! When a future release of Sage FAS becomes available, you only need to install the update at your central location, not on individual PCs and laptops. Plus, upgrading this way is the same as upgrading any single copy of Sage FAS has been in the past — there is no separate Web version to worry about.

Update, manage, and report on your fixed asset data whether you're traveling, telecommuting or working away from the office with Sage FAS and Remote Access Technologies. Sage FAS Fixed Assets gives you the flexibility to manage your fixed assets anytime, anywhere. That's because Sage FAS works with virtually any remote access technology, enabling seamless remote connection to your fixed asset information.

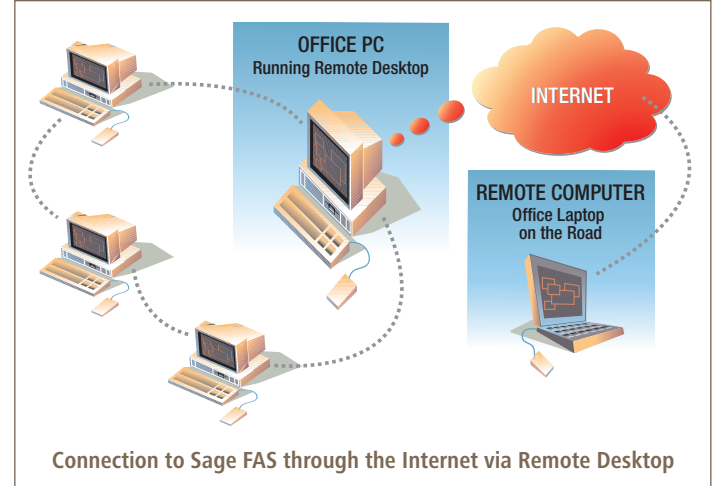

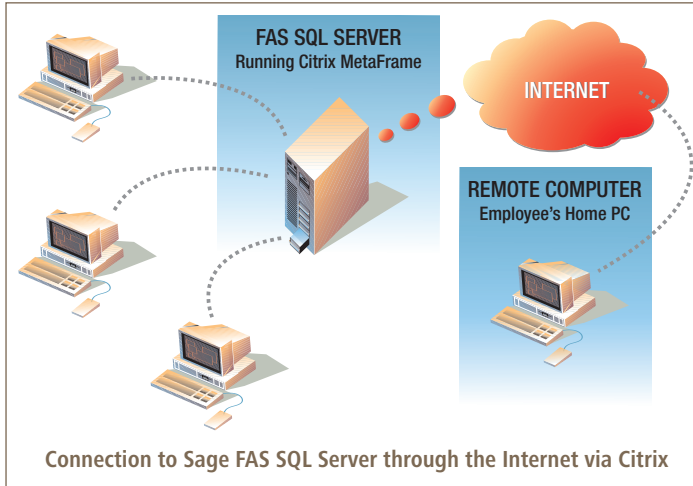

Many Sage FAS customers already access Sage FAS remotely for reliable, flexible fixed asset management, and so can you. Using Sage FAS remotely is extremely convenient for branch offices that need to update fixed asset information even if the application is not deployed at every site. Remote access technologies also enable telecommuters to use Sage FAS. You can even share your fixed asset data with your CPA without having to send files or disks between offices.

From developing innovative products to providing award-winning customer support, Sage Software is dedicated to surpassing expectations in all aspects of our business. For more information about Sage FAS, please call us toll free at 800-368-2405, or visit our Web site at [www.sagefas.com](http://www.sagefas.com). Sage customers service representatives are standing by to provide you with top-notch products and service.

## Remote Access for Sage FAS

*"Connecting to our Sage FAS solution remotely saves us time and money. It is a very convenient way for us to reach data while on the road, as well as to share it with our accountant during tax season. Plus, knowing that we host our own data in our own secure computing center means that third-parties do not have access to internal records."*

### Sage FAS Works with Popular Remote Access Technologies

Sage FAS comes built-in with the ability to connect you to your data using any new or existing remote access technology with minimal implementation effort. Many Sage FAS customers utilize Citrix®, including their GoToMyPC™ service, to link to their fixed asset information from home or while on the road. Microsoft® Windows® Terminal Services and Remote Desktop are included free of charge in some versions of Windows, so you can start to use Sage FAS remotely with no additional start-up costs. You can enable remote access to Sage FAS using any of these leading technologies:

- Citrix
- Windows Terminal Services
- Windows Remote Desktop (built into Windows XP)
- VPN
- And many more!

### Centralized Data Ensures Security and Accuracy

When users access Sage FAS remotely, fixed asset information is stored in one central location, ensuring accuracy across the organization. With the Sage FAS application deployed at a single source, all upgrades and database conversions can be performed in the same place, while users can be located anywhere. Whether

sitting down the hall, working from home, or traveling across the country, remote access technologies allow Sage FAS users access to the same information they would have if the application were installed on their own PC.

Remote access technologies ensure that the data you update in Sage FAS is completely secure, an important consideration in today's environment. Unlike applications accessed through a Web browser, all Sage FAS data remains on the computer or server that contains the Sage FAS application. There is no need to install Sage FAS, or any of your potentially sensitive financial database files, on the remote user's computer. With today's popular remote access systems, you send only keystroke data back to Sage FAS — not entire records of sensitive financial information!

### Complete Fixed Asset Control with Added Convenience

By employing remote access technologies with Sage FAS, you'll benefit from the performance of Sage FAS wherever you happen to be! You'll gain access to every feature in Sage FAS and use the same familiar interface without worrying about compromising security or limiting performance. As you work with fixed asset data, your changes are made securely and in real-time in a centralized location so that both remote and on-site users benefit from total data accuracy and integrity.

Please note: Sage Software does not provide technical support for third-party products.
